

## Overview

### Could Yield Enhancement Network (YEN) participation help you?

#### About the Great Lakes YEN

The Great Lakes YEN is a ground-breaking cross-border collaboration that connects farmers with agronomists, academics, extension specialists, agricultural organizations, and more.

The goal of the Great Lakes YEN is to learn more about specific crop and field characteristics that could uncover opportunities for closing the gap between potential and actual yield.

In its first year, the Great Lakes YEN will focus on Winter Wheat. For more information, visit [www.greatlakesyen.com](http://www.greatlakesyen.com).

The Great Lakes YEN is part of the global group of YENs, introduced by ADAS, an agricultural and environmental consultancy and provider of rural development and policy advice in the United Kingdom.

#### Why would you sign up for the Great Lakes YEN?

- Farmers will retrieve agronomic field data and have analysis done to help indicate missing links to improved yields
- Opportunity to share datasets and improve knowledge of wheat with peers
- Farmers will have a field benchmarked against its potential yield and against the fields of other farmers

#### What will be analyzed?

Farmers participating in the Great Lakes YEN will agree to collect soil, tissue, and grain samples at specific times throughout the duration of the project and send them to a lab for analyses.

Analyses and benchmarking will include:

- Agronomic and management data
- Soil samples
- Tissue samples
- Grain composition
- Weather and soil data

#### How do farmers sign up?

Farmers are invited to apply for the Great Lakes YEN at [www.GreatLakesYEN.com](http://www.GreatLakesYEN.com).
